■ no perturbation

Drop per arm

$$D = \text{mean}(L2C) - \text{mean}(E2C)$$

Interaction

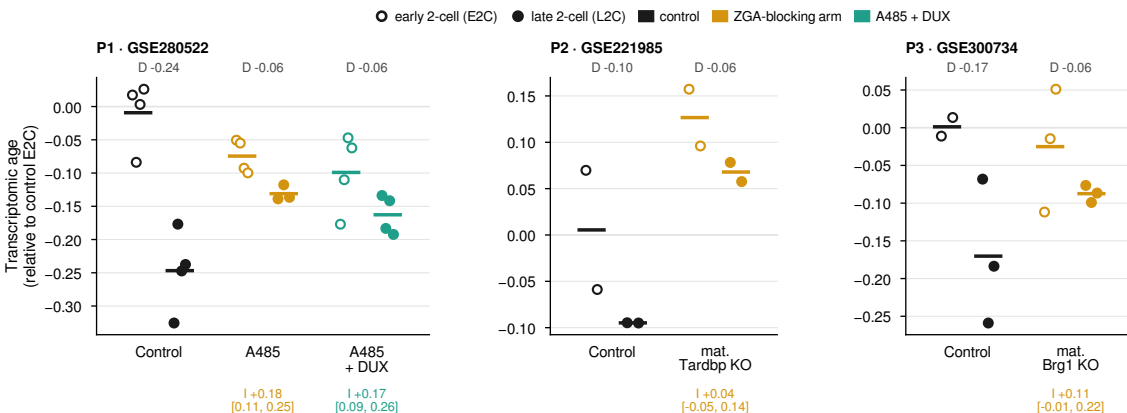

$$I = D(\text{perturbed}) - D(\text{control})$$

$I > 0$: smaller decrease

$$R = D(A485 + DUX) - D(A485)$$

Libraries per group: 2–4 after
prespecified QC (3 of 76 excluded)

b

D, drop per arm (late – early two-cell mean). I, interaction against the control arm of the same dataset, with 95% bootstrap interval (2,000 replicates).
 $R = D(A485 + DUX) - D(A485) = -0.007 [-0.063, 0.057]$. Values with dynamic genes removed (V2) are in Table 2.
