

a**b**

D, drop per arm (late – early two-cell mean). I, interaction against the control arm of the same dataset, with 95% bootstrap interval (2,000 replicates). $R = D(A485 + DUX) - D(A485) = -0.007 [-0.063, 0.057]$. Interactions with dynamic genes removed (V2) are given in Section 2.3; per-library V2 values are in Table S2.
